USE CASE DIAGRAM

Use-case diagrams describe the high-level functions and scope of a system. These diagrams also identify the interactions between the system and its actors. The use cases and actors in use-case diagrams describe what the system does and how the actors use it, but not how the system operates internally.

CLASS DIAGRAM

Class diagrams are the blueprints of your system or subsystem. You can use class diagrams to model the objects that make up the system, to display the relationships between the objects, and to describe what those objects do and the services that they provide.

SEQUENCE DIAGRAM

A sequence diagram is a Unified Modeling Language (UML) diagram that illustrates the sequence of messages between objects in an interaction. A sequence diagram consists of a group of objects that are represented by lifelines, and the messages that they exchange over time during the interaction.

FUTURE SCOPE

- UI/UX Implementation
- Adding Templates

To run you're challenging yourself whether it's right for you. It's go and go with it's falling behind possibilities. Like!

allenging to find happy situation that you don't cause we're comparing other people rather than it's really going on focus on the negative.

to ourselves, when we choose to surrender our passion and purpose is meaningless. Joy is by deciding what we're doing every day. It means believing and starting.
